This new-construction, mixed-use building, located in uptown Dallas, is LEED-certified. Creativity was key in coming up with low-watering, minimalist-yet-textured plants for nine cement containers in the lobby.

In one grouping, two end containers feature a combination of small yucca stumps in the center, surrounded by donkey's tail. *Chamaedorea metallica* in the middle container is accented by variegated Peperomia. In this single container, two broadleaf plants, *Cordyline glauca* and *Kalanchoe thyrsiflora*, create a coordinated look. In another bowl at the front of a grouping, *Kalanchoe thyrsiflora* encircles spiky burgundy *Cordyline* 'Sensation.'
